**Hydro Nation Scholars Programme** 

#### Introduction

Wastewater treatment works in numbers:

1,843

Public wastewater treatment works<sup>1</sup>

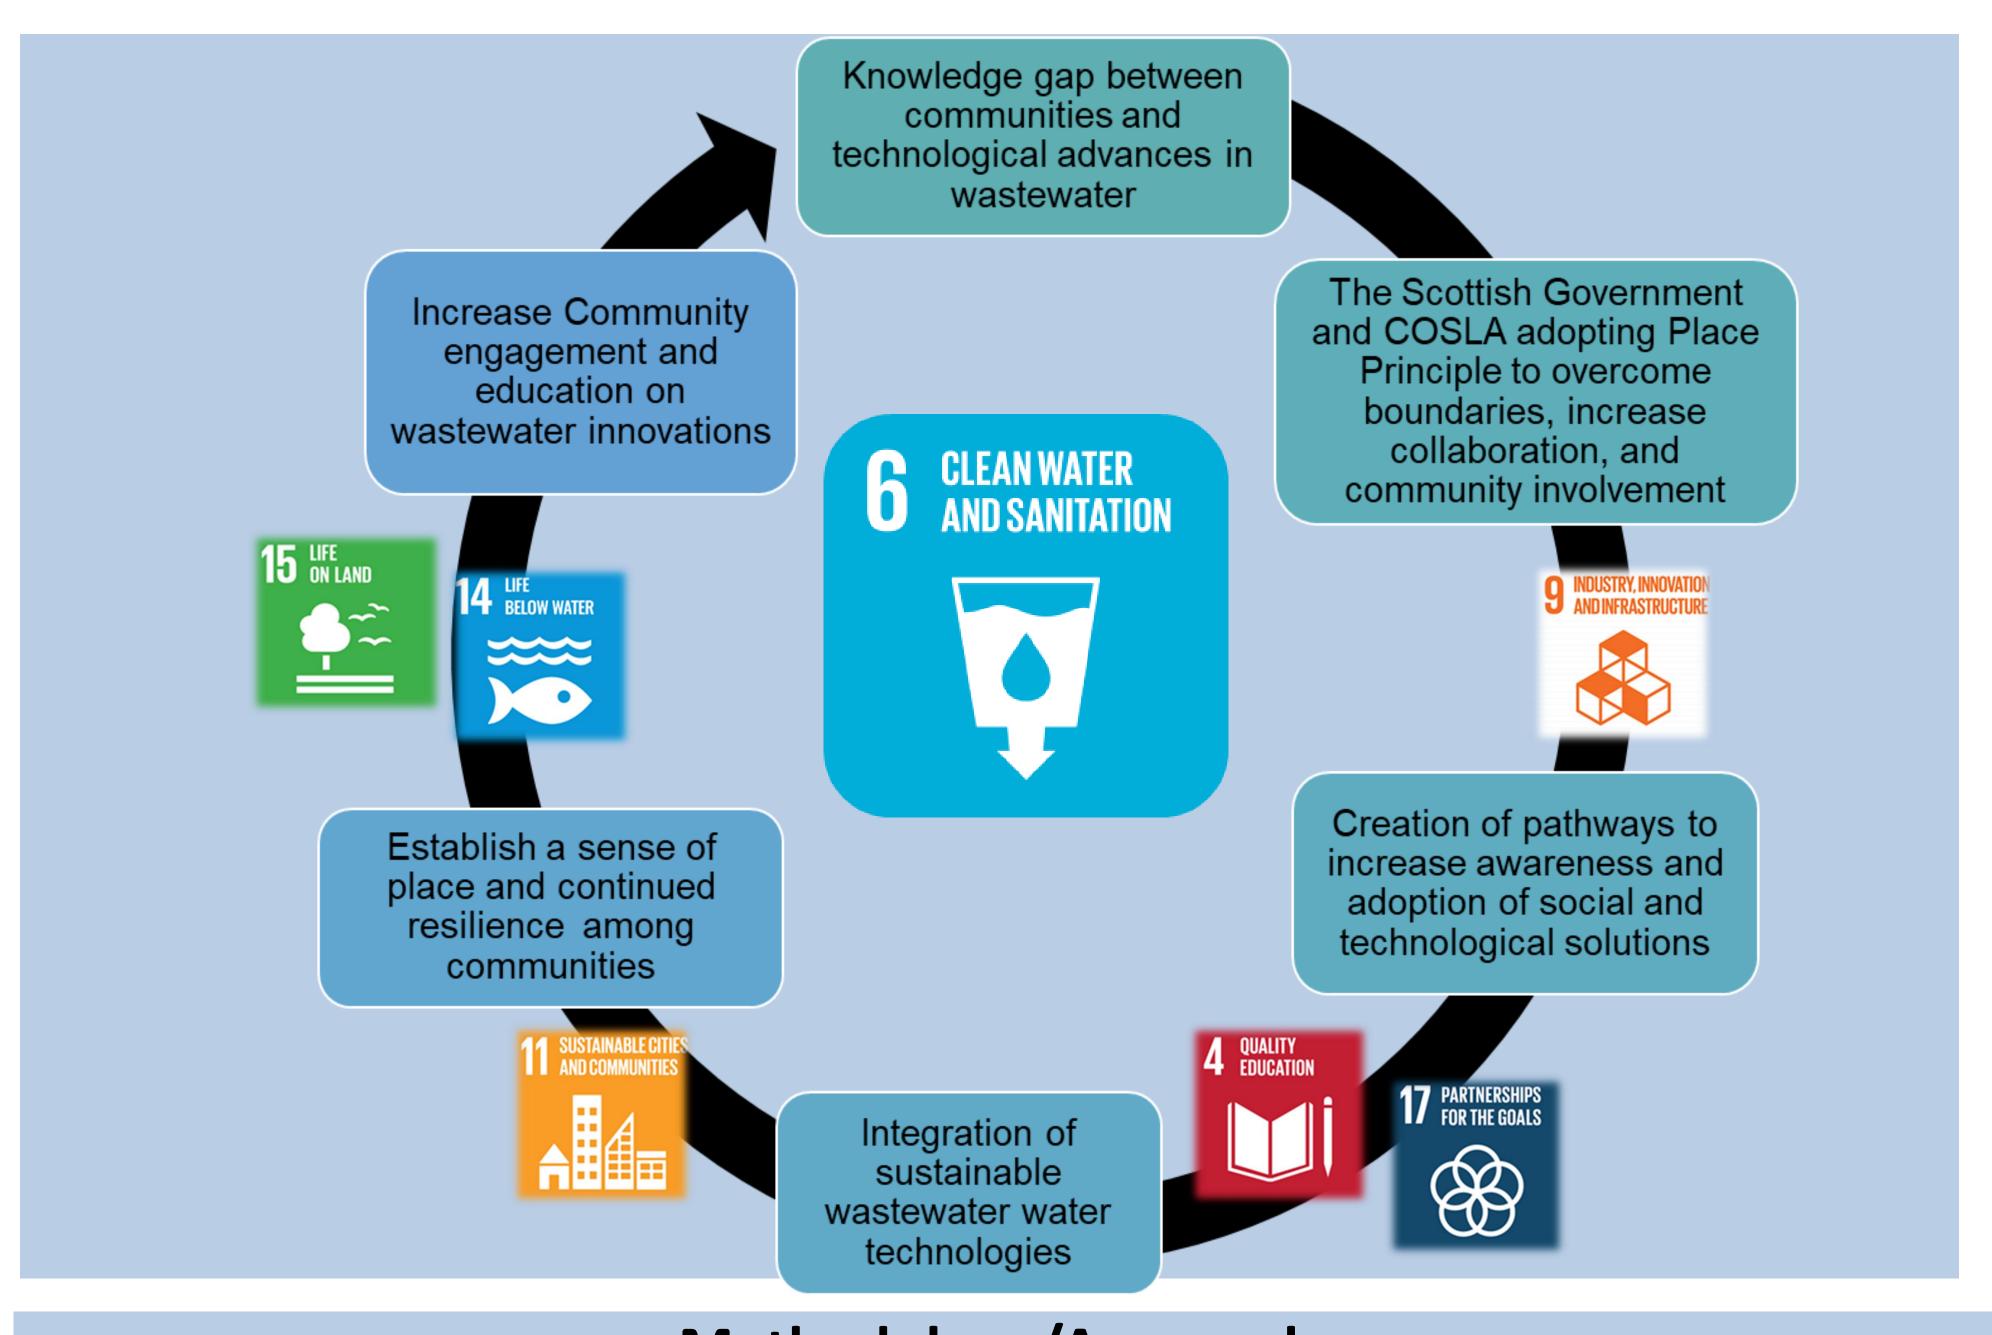

168,635

Private wastewater systems<sup>1</sup>

- Scotland has more privately-managed wastewater treatment works than public works, yet individual and community led managers of wastewater treatment systems remain distant from innovative technological solutions that emerge. <sup>2,3,4,6,8</sup>
- Scotland needs bottom-up approaches to engage and increase place-based community engagement in wastewater management.

#### **Future Contributions**

- A Logic Model supporting pathways to change in wastewater management.
- New theoretical insight into the implementation of social and technological innovations in small wastewater systems.
- Increased engagement between communities and the private and public sectors in wastewater management.

# Methodology/Approach

#### Stage 1

Systematic review of international literature on wastewater innovation adoption by communities

#### Stage 2

Qualitative interviews with selected communities

Identification

Identification of current knowledge and understanding

Interviews with relevant stakeholders

### Stage 3

Engagement with actors involved in the innovation in wastewater technology

## Stage 4

Participatory
Theory of
Change based
workshops
with
communities

#### Stage 5

Development
of logic model
to engage
communities
and to review
and finalise
framework

# 5. 'Scottisl

# Project Aim

To investigate and support the sustainable and local adoption of social and technological innovations through developing new pathways for effective wastewater management.

#### **Project Objectives**

- Identify wastewater innovation adoption challenges through evidence-based pathways.
- Develop new pathways and strategies for adaptation in place-based systems to better prepare for future challenges associated with climate change.
- Create an operational framework to increase collaboration, community action, and education.
